

CWP Coloured Veneer, Colouring Services and Laminated Blanks

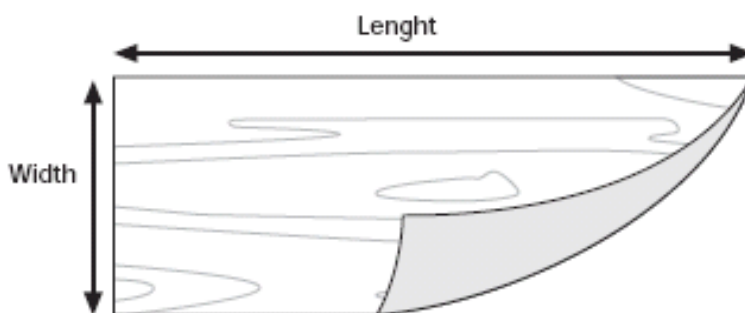

COLOURED VENEER

The colour veneer can be used as such in several applications as surface or structural veneer or as an effect colour in bent parts or interior design panels and moulds, for example. CWP uses mainly birch veneer. Order the veneer grade of your choice in the colour you wish. The veneer to be coloured can be 0,6 mm surface veneer or 1,5 mm structural veneer, for example.

COLOURING SERVICES

We can also colour the veneers according to your specifications. Colouring by order results in the same technical and aesthetic properties as CWP's own veneer. Send your veneer to us for colouring. We have coloured most woods. If you have a special wood to colour, ask us how the wood type in question reacts with dyes.

Material Requirements for colouring

Sizes: L300 - 3,000 mm x W100 - 300 mm

Thicknesses: 0,6...3,0 mm

LAMINATED BLANKS

When individual coloured veneers are glued on top of each other and pressed together, a laminated blank is created. Several standard colours are available, but we usually produce the blank according to the veneer size, thickness and colour most suited to your purpose.

Laminated blanks are most used for 3D shapes. Mainly used veneer is 1,5 mm thick birch. The basic blank size for example is 850 mm x 280 mm x 60 mm. It is made of 43 layers of 1,5 mm birch veneers.

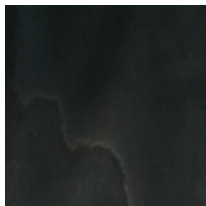

AVAILABLE COLOURS

Commonly used colours in production:

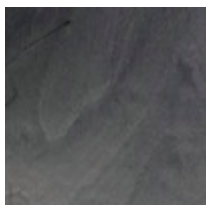

G (green)

EBC (dark grey/black)

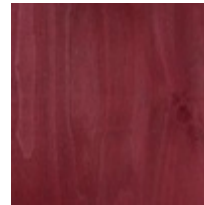

BW (Brown)

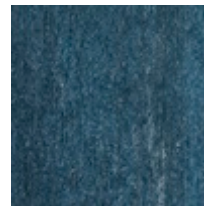

SG (silver grey)

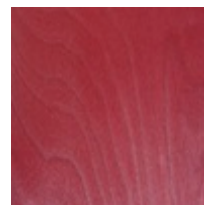

BO (bright orange)
